

Test your internet speed for free on any device at anytime

10+ million tests per day, 29+ billion tests to date

Ookla® Speedtest® is a consumer-initiated test to measure your internet performance. The proven technology behind Speedtest is purpose-built for accurate and unbiased internet performance testing, allowing operators and regulators to visualize, gauge and troubleshoot the speed and quality of internet connections.

## Measuring your internet connection

Consumer-initiated testing gives people the flexibility to initiate a test at any time and in any location. When a critical mass of tests are taken, a comprehensive view of internet performance is achieved, including information about locations, times, service providers, and devices. This view allows operators and regulators to see consumer's experiences and improve on internet connectivity.

Connecting our cities and communities with improved wireless broadband connectivity offers great potential to transform societies with innovative wireless technologies across education, transportation, health care, environment and public safety.

## Simple and easy to use

**Web:** Use your laptop or desktop computer by going to **www.speedtest.net** and clicking on the "Go" button.

**App:** Download the free Speedtest app from Google Play on your Android device or the App Store from your Apple device.

Android

iOS

macOS

Windows

Chrome

Apple TV

Speedtest does require a device to be connected to the internet. While a little bit of data is used every time you initiate a test, do be aware if your data plan has capped usage.

Take a Speedtest on any device to test your connection whenever you are connected to the internet with Wi-Fi and mobile. Tests can be taken at any location, whether it be in homes, shopping centers, workplaces, parks, airports, as passengers in cars, on trains, or on buses, while in one place or on the move.
